Basic Concepts of Functional Assignment

Workshop Report

2-4 September 2015
Bangkok, Thailand
Local Governance Initiative and Network (LOGIN) is a multi-stakeholder knowledge exchange platform that supports greater decentralisation and strengthened local governance in South and East Asia. Spanning over 10 countries, LOGIN's members include elected representatives, training institutions, think tanks, government departments, non-governmental organisations and inter-governmental organisations, among others. Working in favour of accountable, transparent and inclusive local governance, LOGIN facilitates knowledge sharing and peer-engagements on key governance issues amongst its members. Since its inception in 2013, LOGIN has been connecting and capacitating various actors and change agents who are driving reform agendas within their countries and the region.

As part of LOGIN's thematic focus on Public Service Delivery, an orientation and sharing workshop on the basic concepts of Functional Assignment was held from 2-4 September 2015 in Bangkok, Thailand. This Learning Offer provided an opportunity for LOGIN members to understand the concepts, principles, processes and challenges entailed with regard to Functional Assignment. LOGIN members from the government, training institutions, non-governmental organisations and civil society actors working on strengthening public service delivery at the local level in their countries participated in this Learning Offer. This Workshop Report summarises the methods and proceedings of the three-day event.

LOGIN is supported by the Swiss Agency for Development and Cooperation.

Executive Summary

The Functional Assignment (FA) workshop, held during 2-4 September 2015, sought to provide LOGIN members with a deeper understanding of the FA concepts, principles and processes to enable participants to conceptualise their own country-specific approaches to FA. Participants from Afghanistan, Bangladesh, Bhutan, Cambodia, India, Indonesia, Mongolia, Myanmar, Nepal and Pakistan came together to engage in three-days of intensive deliberations.

FA is the process of assigning functions to different levels of the government. Assigning functions is not a one-time affair; it involves continuous efforts driven or restricted by various socio-economic and political forces. Getting the right functions assigned to the right authorities helps in using public resources more effectively and increasing the efficiency of the public sector at the national and sub-national level.

Capacity development is integral to the FA process, since both the national and sub-national governments (SNGs) require new capacities to perform the newly assigned and/or modified functions. Functions could be assigned through one of the three modes of decentralisation – deconcentration, delegation and devolution. Further, functions could be either reserve/exclusive or concurrent; or even obligatory or optional.

Mapping functions involves two steps: (a) vertical unbundling: Disaggregation of each sector into sub-sectors and clusters of functions, and (b) horizontal unbundling: Disaggregation of each sub-sector into constituent functions, i.e. deciding who is currently responsible for policymaking, planning, implementation, monitoring and evaluation etc. This pertains to the de jure (legal framework) and de facto (what is happening on the ground) situation.

At this workshop, a normative view of FA was provided through the business process model. The model illustrated FA as composed of five steps: defining the scope and goal of FA, organising for FA, functions mapping, functions review, and effecting the transfer and implementation/monitoring. Workshop participants used the basic concepts of FA to critically examine their own country situations. Some of the common points that emerged included the importance of political will in pushing the FA process forward, similarities in the challenges to FA, the tight link between devolution of funds and functions, and limited citizen participation (in practice if not in principle) in the FA process.

Further, participants deliberated on the ideal FA process from the perspective of government officials, think-tanks/NGOs and elected representatives. This exercise brought out the specific roles that various stakeholder groups can play in the FA process. At the end of the workshop, participants presented concrete follow-up actions that they would undertake in their own countries. The action plans included sharing the knowledge gained through the workshop with fellow country platform members and establishing partnerships with government departments to push for FA reforms.
Background

At the 2nd LOGIN General Assembly held in December 2014, network members identified Functional Assignment (FA) as one of the learning priorities for the year 2015. Countries where LOGIN has its presence have diverse experiences in FA. Members felt the need to gain exposure to the technical aspects of the FA process and, hence, an orientation workshop was conceptualised.

The workshop was held during 2-4 September 2015 in Thailand. Participants from national governments, local governments, think-tanks, civil society organisations (CSOs), non-governmental organisations (NGOs), and international NGOs participated in this Learning Offer. Apart from nine LOGIN member countries (Afghanistan, Bangladesh, Bhutan, Cambodia, India, Mongolia, Myanmar, Nepal and Pakistan), Indonesia was also present to share its rich experience in FA. Mr. Rainer Rohdewohld and Mr. Gabriele Ferrazzi provided their subject matter expertise to the design, content and processes of the workshop. The learning process was facilitated by Mr. Cherian Joseph.

This report captures the content as well as the proceedings of the three-day event.
FA METHODOLOGY:

- Defining the Goal & Scope of FA
- Org for FA
- Fun & Mapping
- Fun & Review (decisions)
- Effecting the Transfer & Imp/monitoring

- Technical support to Policy co-ord. bodies
- De-facto & De-jurige mapping in consultation with Sector experts
- Review/re-define FA map
- Lobbying/Advocacy

- Monitoring of implementation
- Part of implementation process

- Conceptual clarity on Modalities of Decentralisation
- Defining FA scope
- Facilitating dialogues bet diff. stakeholders
DAY 1
Basic Concepts of Functional Assignment
1. Inaugural session

Secretariat’s presentation

The team leader of the LOGIN Secretariat welcomed the participants and provided a brief introduction to the network, its structure, objectives and signs of change triggered by LOGIN in member countries. The team leader noted that issues of local governance are transnational, making convergence of different countries on a single platform more meaningful.

Sharing about the network, the team leader stated how LOGIN’s activities, while engaging a range of institutions, finally aim at the citizens. These activities are clustered into thematic areas that are interconnected – it is expected that participants from one learning event would make connections with and contribute to other learning events. Further, it is hoped that in future the one-off learning events would lead to an increasing number of peer-partnerships that bring together members to forge long-term knowledge partnerships.

The network is currently re-examining its structure, membership expansion and sustainability. In the long run, LOGIN would like to position itself as a strong, sustainable South-South facility for knowledge exchange.

Introductions

The learning facilitator welcomed the participants and engaged them in a series of ice-breaking exercises. Participants were given special ‘passports,’ each of which had a colour, a number, an animal and a figure. Participants were asked to form groups according to these four cues.

In the first round, participants were asked to introduce themselves to their group members. In the second round, they were asked to discuss the question – “Why do we need a workshop on FA?” In the third round, participants were requested to put their signatures on a white board. Clusters of signatures were made and each cluster was declared a group. In these groups participants were asked to discuss the question – “Do we need to champion FA?”

Subsequently, groups were formed around the animals and figures cue and participants were asked to discuss the questions – “Which other institutions should have participated at the workshop?” and “What can we expect to learn from this workshop? What will we bring to the workshop?” These multiple rounds of grouping and re-grouping helped participants get to know each other.

Workshop objectives and learning outcomes

The workshop was organised with the following objectives:

- Provide orientation to the concepts, principles and processes of FA
- Enable participants to conceptualise country-specific approaches to FA
- Seek ideas/feedback on the coverage, content and delivery of the proposed e-course on FA

Resource persons pointed out that different countries were at different stages of assigning functions to various levels of the government. Hence, the workshop would primarily entail a ‘give-and-take’ of knowledge by the participants. Although a model of FA would be presented at the beginning, the workshop will be sensitive to the diversity of political realities and institutional environments in participant countries. Thus, the model presented would serve as a basic outline that would help participants emphasise, criticised
and modify specific aspects of FA depending on their own country contexts. The basic principle applied in all discussions would be expert-learner duality: a participant is both an expert as well as a learner and, therefore, ‘gives’ as well as ‘takes’ knowledge from fellow participants.

The expected learning outcomes of workshop were as follows:
- Be familiar with the different modes of decentralisation and typologies of FA
- Understand essential elements and stages of FA
- Be familiar with the legal construction of FA

Resource persons noted that the framework of LOGIN allows not only government and elected representatives, but also other kinds of institutions to partake in learning about FA, which is a subject that otherwise gets restricted to government bodies and technical experts. They hoped that the workshop would not remain a one-off event and that the discussions would continue beyond the three days, based on the common understanding and feedback that emerges. The workshop was also a reminder that there are reform areas that still need attention that do not find place in the popular decentralisation reform agendas in many countries.

2. Basic concepts of Functional Assignment

In this session, the resource persons presented the basic concepts of FA. Key points that emerged from the presentation are elaborated below:

Scope

FA involves the allocation of roles to various levels of the government, including the design of hierarchy and the supervision relationships between different levels. Some of the key topics that come under the broad umbrella of FA are:
- Expenditure assignment: Allocation of spending responsibilities to various levels of government. Though the term is often used synonymously with FA, the two may not be the same always
- The right of initiative: Right to make new proposals of legislations and bills
- General competence: Range of functions that a particular level of government should be competent to perform
- Right to regulate: A particular level of government should have well-defined rights to make regulations. This is related to the freedom of that level to choose the functions it wants to retain
- The issue of dual roles: The possible dual roles that SNG officials might be forced to play. They might be expected to serve as officials serving the jurisdiction of the local government as well as agents of the central government
- Territorial aspects: FA also involves considering the territorial aspects – deciding the number of units, levels and associated functions

Division of power

In the 18th century, Montesquieu put forward the idea that the power of the state should be vested in three separate institutional pillars—legislative, executive and judiciary. In a country that employs devolution, the
three pillars would be present at the local/sub-national level as well. This scenario is diagrammatically presented below:

![Diagram of Areal (Territorial) Division of Power]

In a decentralised system of governance, services are provided by governments at all levels according to a predetermined arrangement.

**How does the government provide services?**

The government can provide services in one of the following ways:

- Do it by itself by means of national agencies which might or might not have branches/field offices in various parts of the country
- Seek assistance from SNGs by delegating specific tasks to them
- Permanently assign a function as the ‘own task’ of SNGs, giving them significant control over it
- Privatise, wherein service production is transferred to private parties
- Entrust some functions to community groups. Examples of such functions include water management and social forestry
- Delegate functions to semi-autonomous agencies, such as special operating agencies and state-owned enterprises, to provide services

These choices of providing services are possible at the national but, in a more limited way, also at the sub-national level. Where there are many levels of SNGs, these choices play out at each level, and the government attains a complicated design.

**Modes of decentralisation**

- **Deconcentration:** Deconcentration is the internal delegation of administrative tasks to the representatives or branches of the central government dispersed over the national territory. A special form of deconcentration is when certain SNG positions are designated to have dual roles – as a member of the SNG and as a representative of the central government
- **Delegation:** Delegation involves the assignment of tasks (also referred to as agency tasks) to general purpose local governments or a special purpose/semi-autonomous body. The entrusted entities are often democratically accountable to their citizens, in addition to the central government. Delegated tasks may require the agreement of both parties, or may be imposed on the SNG. Sometimes there can be resistance from the SNGs if, for instance, the SNG determines that the resources provided are insufficient to carry out the tasks
Devolution: Devolution is the transfer of functions, requisite power and resources to SNGs. SNGs have considerable autonomy and are largely accountable to citizens in this scenario. The existence of a body of elected representatives underlines the political dimension of devolution. Devolution comes closest to the commonly used definition of decentralisation, i.e. the transfer of political, fiscal and administrative powers to SNGs.

Table 1 elaborates how various aspects of service provision differ in the three modes of decentralisation.

Choosing the right mode of decentralisation

Although the general perception is that as compared to devolution, deconcentration and delegation are weaker forms of decentralisation, there might be cases where there are strong reasons to keep some functions deconcentrated or delegated. The application of the right principles of FA would determine which level should have a function and to what extent:

- Deconcentration could be chosen as the preferred mode of service provision if it is paramount to retain control of power, impose uniformity or stress nation building. This might be the preferred mode especially in contexts where capacities and funds are limited.
- Delegation is preferred where the higher level of government wishes to have control over local areas, but does not have organisational reach. In such contexts, the higher level government could enlist assistance from SNGs and others to provide services.
- Devolution could be the preferred mode if the primary goals are responsiveness and accountability to citizens, participatory decision-making, integration across functions that are interrelated and resource mobilisation.

Although, compared to the other two, devolution involves considerably more transfer of powers to SNGs, a combination of the three is more commonly observed.

Federal versus unitary structure

In federal states the constitution clearly states the functions of the federal and state/provincial governments, while in unitary states the central government sets the framework of functions for SNGs. Within federal states, there can be a large variation in the level of decentralisation. Unitary states may or may not have clearly defined hierarchies between levels of the SNG.

Listing functions

Listing functions for various levels of the government could be done in multiple ways. Two of them are outlined below:

- Ultra vires model or positive-negative lists: This mode lists what functions a SNG is and is not supposed to perform. Such listings give clarity and certainty regarding responsibilities, but can often be too restrictive.
- General competence: This mode is gaining increasing popularity because of its wide scope. It provides a broad and permissive statement on the role of SNGs – what a SNG is ideally supposed to do at the local level (such as citizens’ welfare, economic development, conservation of the environment, maintenance of order and peace etc.). It allows SNGs to be more proactive in taking up tasks and frees them of the fear of going ultra vires, i.e. outside the given mandate. General competence needs to be complemented with clarity on key obligations or performance standards. However, in practice general competence can be seen only in a weak form as SNGs are generally not allowed to infringe on the functions of the higher levels.

In reality, a hybrid that is somewhere between a strong ultra vires and a strong general competence scenario is observed in many governance systems.

Types of functions

Functions could be either reserve/exclusive, residual or concurrent. From a different perspective, functions can be either obligatory or optional. These types of functions are elaborated below:

- Reserve/exclusive: Functions that are entirely retained by the national government. The reserve/exclusive nature of the national list is usually implicit, but in some constitutions and/or legal systems it is explicit.
- Residual: Functions that have not been explicitly mentioned and are assigned en bloc to a specific level. Most often these functions are given to the national level.

- Concurrent: Concurrent generally means that specified levels of the government can undertake specific functions. Concurrent functions are variably referred to as joint or shared functions. The processes involved in assigning concurrent functions include deciding whether all levels of the government can undertake a function, determining the mechanism of negotiations and choosing the preference rules in case of an impasse. The advantage of concurrent functions is that they increase flexibility/options. However, concurrent function can dilute accountability and lead to constitutional clashes.

- Obligatory: Obligatory functions arise from state commitment to citizens – a part of social contract enshrined in international conventions and constitution/laws. The central state cannot entirely shed its responsibility by letting the SNGs take up these functions as they wish. Hence, they are made obligatory. These are mostly focused on basic services and have explicit performance expectations/minimum service standards. The central government has the obligation to track performance and help SNGs successfully discharge functions (through funding, technical support etc.).

- Optional: In contrast to obligatory functions, optional functions tend to be very local in nature and often depend on local identification. Their intensity and duration depend on local interest and local resources. Mostly there is no higher level interest/supervision in their performance.

The business process view

The business process view provides a normative framework of FA, as explained below:

![Business Process View Diagram]

1. **Defining the goal and scope of FA**
   - This step relates to the overall reform goals of decentralisation. Some clarity is needed on the scope of FA, but it is hard to get. If this step is heavily contested, it can come back to haunt later in the process.

2. **Organising for FA**
   - The FA process needs to be well guided across sectors.

3. **Functions mapping**
   - Functions mapping lays out clearly who is doing what. Unbundling and other tools can be used to map current situations.

4. **Functions review (decisions)**
   - Functions review uses the same tools as functions mapping, but with the purpose of proposing changes.

5. **Effecting the transfer and implementation/monitoring**
   - This step involves a systematic anticipation of actions needed to transfer functions effectively and consistently with the intent and principles (e.g., resources matching, modalities).

Discussion

At the end of this presentation, participants raised many concerns regarding the applicability of the models presented. Some of these concerns are listed below:

- Regarding the three pillars of the state, the real issue is whether legislatures at the local level are mere extensions of legislatures at the central level.
How far can central governments go in giving discretionary powers to SNGs? Often SNGs have limited discretion in making decisions, in spite of having devolved functions. Decisions by SNGs could be sent to the higher levels for vetting. Rarely do local governments stand up to higher levels of the government and object to the infringement of their powers.

What could be the possible channels of accountability in devolution? Elections and social accountability are two key ways of ensuring accountability.

What is meant by integration of functions?

There could be functions which stand separate, but are interrelated. For instance, agriculture could be strongly linked to roads and infrastructure. Thus, integration involves taking care of a range of interrelated services in a holistic manner. However, sometimes decentralisation can take a back seat when the central government focuses on NGOs and entrusts them with the major service delivery tasks. This can make it difficult for SNGs to integrate across functions.

Does the normative model of FA suggest that finance follows functions, while in reality functions seem to follow finance? Although ideally finance should follow functions, the reality could indeed be different. Placing finances ahead of functions may be necessary in some cases, but generally does not lead to rational and accountable institutional arrangements in the provision of services.

Can poor FA in some countries be related to the fact that the FA methodology itself is not working? The failure of FA to take off in many countries could be attributed to political factors rather than the weakness of the methodology.

Would FA require large scale institutional re-arrangements? Form should follow functions. The arrangement of institutions should be in line with the assignment of functions.

What should be the immediate results of FA?

- Assignment of functions should be clean
- The process should be supported by stakeholders
- The framework should be implementable
- The process should have stability

3. **Country situations**

Participants were split into country groups and asked to present the current FA situation in their countries with regard to the following:

- Degree of FA/decentralisation
- Scope/frame of recent reforms
- How has the process of reform been organised?
- What are the main challenges?
- To what extent does the country reflect concepts/understanding shared today?

Participants recorded their observations on flipcharts, which later formed a ‘market place.’
Afghanistan

- Degree of decentralisation:
  - The government is unitary and has two levels, with 34 provinces
  - Initial steps taken to deconcentration
    - Adoption of the Sub-national Governance Policy
    - Fiscal deconcentration
    - Deconcentration has been piloted in agriculture, public health, and rural rehabilitation and development
    - Operations and maintenance responsibilities have been given to SNGs

- Scope of recent reforms:
  - District coordination council has the responsibilities of policy development, agriculture, education and conflict resolution
  - Main stakeholders are line ministries, Members of Parliament, the media, CSOs, development practitioners, office of the President at the central level, and provincial administration, district, provincial council at the local level

- How has the reform process been organised:
  - The administrative aspects are overseen by the Civil Service Commission
  - The political aspects are overseen by the Independent Directorate of Local Governance
  - The fiscal aspects are overseen by the Ministry of Finance

- Main challenges include:
  - Low capacity
  - Lack of political will
  - Low teamwork experience among stakeholders
  - Each stakeholder sees one’s own organisation’s interest
  - The overall situation is that of deconcentration

Bangladesh

- Constitution of Bangladesh (1972), Article 59, all local government institutions ruled by elected representatives

- Rules and circulars: Ward shava, open budget, Upazila Development Coordination Committee/Town-Level Coordination Committee, women’s forum, Horizontal Learning Programme

- Consultative workshop and online opinion – main stakeholders:
  - Political leaders
  - Bureaucrats
  - Civil society
  - NGOs, DPs

- Main challenges include:
  - Resource mobilisation
  - Coordination

- Decentralisation process is in progress: FA of local government institutions, private sector, NGOs and development practitioners need to be executed further

Bhutan

- Administrative scope: Regulatory, staffing (lower level), planning and budgeting, collection of revenues and retaining

- Recent reform: The new constitution of the Kingdom of Bhutan

Contd…
Level of government involved:
- The king
- Central government
- All sectors

Linked to planning and fiscal responsibility transfer is the participatory preparation of the local government Five Year Plans, entitlement to annual grants, and participatory preparation of annual local government plans

Linkages to accountability system: Royal audit authority was instituted, anti-corruption commission was instituted

How FA was organised: Vision of the king in a pro-active way

Main stakeholders: Civil servants, religious institutions, judiciary, legislatives, general public at local government level, their feedback during final consultation

Main challenges includes the sentiments of the people regarding decentralisation, as well as the capacity of the people to interpret the constitution

Cambodia
- FA is an ongoing process
- Four ministries have completed FA, while six have completed functions mapping. There have been two pilots (health and rural development)
- Cambodia has adopted a legal functions mapping and functions review framework
- The legal framework makes clear that functions transferred must be accompanied by the requisite resources
- Under the National Committee for Sub-National Democratic Development, decentralisation and deconcentration working group of the sector ministries are engaged in the process of FA
- Overall, there is a general lack of understanding on decentralisation and deconcentration concepts
- The entire FA process has been time-consuming
- Currently, only small functions are proposed to be transferred with limited resources
- There has been slow progress in financial reforms
- Concerns regarding SNGs’ capacities are still widely held
- The process is too long with possibly few meaningful results (political pressure needed)
- The country is not sure how to implement obligatory and permissive functions, but has recently issued a clarifying decree on permissive functions, to distinguish these from obligatory/transfered functions

India
- Degree of decentralisation:
  - Administrative decentralisation has been going on since 1947 (independence)
  - Political decentralisation started in 1993 with the 73rd and 74th constitutional amendments
  - 29 devolved functions are rural and 18 devolved functions are urban
  - India has a three-tier local government systems with more than 6,00,000 local governments
- Scope of decentralisation:
  - Activity mapping began with the establishment of the Panchayati Raj Ministry in 2004
  - Different states are at different levels of FA
  - 14th Finance Commission’s report is expected to transform funds directly to local governments
- National level efforts – Ministry of Rural Development, Ministry of Panchayati Raj + state-level decentralisation champions (West Bengal, Karnataka)
- But FA exercise pure administration concern (in transparent criteria, limited stakeholder involvement)
Progressive programmes involving local governments, but instances of parallel power structures (Sarva Shiksha Abhiyan, MGNREGS etc.)

Under-estimating local governments capacity

Funds and functionaries do not match FA

Indonesia

Degree of decentralisation:

- Most key functions have been decentralised to local governments – province and district/city – following a broad designation of which functions were reserved exclusive to the national government, and which were concurrent (could be further distributed). For example, in the education sector (a concurrent sector), universities are taken care of by the central government, high schools by the provincial governments, and primary and secondary schools by district/city administrations.

- Exclusive functions that still belong to the central government include defence, police, monetary affairs, justice, foreign affairs and religious affairs.

- 40% of public expenditure has been devolved to the local governments, alongside a devolution of 70% of the civil servants.

- The fact that except for six all other functions have been devolved indicates a broad scope for decentralisation in the country. Each of the broad (sector) functions that are shared amongst the central, provincial and district/city governments has an assignment that is based on a range of criteria including externality, accountability and efficiency.

- Local governments have been encouraged to raise their own revenues; 10% of the revenue of local governments comes from own sources. The remaining 90% is provided through block grants from the centre.

- Recently, Indonesia has also increased the size of other specific grants. The whole process of funds allocation is linked to the planning process through the National Planning Meeting held every year.

- The FA process in the country involves all government levels and parliament members. The Ministry of Home Affairs takes the lead in involving all stakeholders and spearheading the entire process.

- Main challenges include:
  - Trust between stakeholders is often deficient
  - The centre is often reluctant to give away powers
  - There is sometimes an ‘over-euphoria’ about local governance
  - Capacities are still lacking in various spheres at the local as well as the central level
  - Political support to the FA process is often weak

- The workshop discussion on the fundamental aspects of FA is closely related to the experiences of Indonesia, considering Indonesia’s exhaustive effort in realising the process. Indonesia needs a decisive policy, strong supervision and facilitation, and a balanced approach – the country seems to be moving too fast on the FA track, but has been readjusting/fine tuning at different points (2004, 2014).

Mongolia

- Degree of FA:
  - SNG expenditure is 11% of the total public expenditure
  - Delegated functions – education, health

- Scope of recent reform:
  - Adoption of Budget Law 2011
  - Adoption of Glass Account Law 2014

- Types of transfers:
  - Financial support
Earmarked transfers
Revenue transfers – Local Development Funds (LDF)

Decentralisation process is driven by the leadership of the President of Mongolia and Ministry of Finance
Other important stakeholders of decentralisation include the Parliament, SNGs and line ministries
Main challenges include:
- The policy framework setting needs to be comprehensive
- Amendments are required in other key legislations
- There is a need for a comprehensive FA review
- An appropriate FA methodology needs to be selected
- The fiscal equalisation system needs to be improved

Concepts from the workshop that have been applied in the country context:
- Delegation (to some extent to education and health)
- Deconcentration
- Devolution (LDF)

Myanmar
- Myanmar is in the early stages of decentralisation:
  - There are 14 states/regions
  - Public expenditure by SNG is around 8-10%
  - SNGs do not have jurisdiction over civil servants
  - No guaranteed law/policy exists
- The country has established municipal/development affairs committees and development funds
- Accountability mechanisms are in place but not in practice
- Administrative decentralisation is led by Ministry of Home Affairs, General Administration Department and SNGs
- Only tasks are assigned – no guidelines are given
- There is no capacity building programme

Nepal
- Decentralisation evolved from 1960 onward:
  - Local Self Governance Act passed in 1999 – clearly mentioned roles and responsibilities of local bodies
- Nepal is a federal democratic republic country. The new constitution is being drafted; it includes lists of functions of different levels
- A concurrent list of functions is included in the draft
- Agencies involved: Constituent Assembly, MoFALD, different government institutions
- Political challenges: Different ideologies, technical constraints, capacity constraints, resources

Pakistan
- There are three levels of the government – federal, provincial, local:
  - De-centralisation/devolution of powers first took place in 1979 (later discontinued) and again in 2001 (continued for two terms of elected government till 2008)
- In 2011, federal subjects were further devolved to provincial government through a constitutional amendment. This included local governance, health and education
- Once it became a provincial subject, every province made its own Local Governance Act

Contd…
Relevant departments: Along with Planning and Development, law departments involved in recent reforms/acts

Decentralisation reform process is mainly under the provincial local government department. However, other departments like health, education, planning and development, fiscal decentralisation, along with the law departments, have been taken on board

Main challenges include:
- Political will and influence on the reforms requires strengthening
- Monitoring mechanism is weak due to little or no participation of community/citizens
- Human resource capacity at lowest tier is weak
- The system is characterised by authorisation-based models and centralised approaches
- FA concepts, understandings are not being adhered to in the true sense

Discussions

Key points that emerged from the discussion are noted below:

- There are no standard criteria for FA. If the criterion is ‘efficiency’ in Indonesia, it could be a mix of criteria in other countries
- FA is only one building block of decentralisation. The criteria would be different in different settings. The final end goal should be autonomy for the local government
- LDFs involve a lot of intricacies. They should not be seen entirely as discretionary transfers – they are more short term solutions. There is a lot of debate around the purpose and sustainability of LDFs
- Every country has its own history and politics. Therefore, each country should decide its own strategy of devolution
- Citizens and communities should be an integral part of the FA process
- Overtime discretionary powers given to local governments should be balanced with obligations. There should be checks and balances between functions and funds
- Often new governments throw out what previous governments have done. This makes the FA process lengthier. Added to this is the staffing problem of local governments
- In some countries, ministries and departments do not even know what their functions are. This makes FA even more difficult
- Perhaps de facto mapping should be done first to see how FA is being done currently, and then move on to do de jure mapping
DAY 2
Methodology of Functional Assignment
1. Emerging methodology: The business process view

Day 2 started with a detailed presentation on the business process view of FA. It was noted that the model presented a normative framework of FA; real-life scenarios can vary widely. The model, however, helped stimulate thoughts and discussions on the essential features of the FA process.

A crucial building block of decentralisation reforms is the clarification of functions of different levels – national, state/province and local governments. FA is not just the allocation of functions to a level of government, but also ensuring that the particular level is made responsible for the associated outputs and outcomes. This process pertains to various aspects such as financing, staffing, planning and reforming organisational structures. However, many of these aspects often get neglected when actual reforms are realised.

General features of the methodology

Basic considerations

- Flexibility in approach, no ‘one size fits all’ in terms of scope, timing, rigor and support
- Stakeholder participation, with transparency and openness of the process
- Sector institutions play a crucial role by leading the analysis related to assigning functions, identifying stakeholders, consulting with them and providing the government with proposals on what functions should be transferred to what level
- The process is steered by a local government ministry and/or inter-departmental coordination body
- FA methodology changes sector frameworks rather than seek an omnibus legislation

Core techniques

- Use of principles and criteria to aid decisions. These include subsidiarity, externalities, economies of scale, current and potential capacity of the receiving level and others
- Unbundling of substantive parts of the sector/functions in terms of substantive areas (e.g., ‘water’ into irrigation, clean water supply, hydro-generation etc.)
- Unbundling of management functions (like planning, policy formulation, financing, implementation, regulation etc.) for detailed scope of assigned responsibility
- Distinction of mode of decentralisation (devolution/delegation/deconcentration)
- Distinction of obligatory versus discretionary nature of functions
- The crucial stages of the FA process include functions mapping, functions review and effecting transfer

Stages of the business process view

Defining goal and scope

This stage relates to the overall decentralisation reform goals. It involves agreeing on the scope (sectors/ministries) and depth of changes desired, decisions on sequencing/phasing the process, initiating pilots,
defining modalities (for example, deconcentration or delegation or devolution; obligatory versus optional functions; recognising the right of local governments to take up functions that they wish to), agreeing and understanding the criteria to assign functions, reaching a common understanding of what a ‘function’ means, and determining the roles of various levels and stakeholders.

Organising for FA

The practical rolling out of the FA process would involve the following sub-steps:

- Establishing a policy coordinating body for steering the process. Lessons can be drawn from the ‘whole-of-government’ reform approach, which lays emphasis on horizontal and vertical coordination between different arms and levels of government so that they work in a synergistic, and not mutually-undermining, manner
- Considering the seniority of the chairperson
- Considering the cross-ministerial composition of the steering body
- Establishing technical capacities of the coordinating body in areas like supporting sector ministries, facilitating sector processes and reviewing results
- Providing clear guidance to the sectors about how to conduct the FA process
- Getting the ‘buy-in’ from the sectors, especially finance and planning
- Determining the involvement of external stakeholders (development partners, non-government, private sector and academia)
- Aiming for a more technical and non-political process
- Establishing a timeline

Functions mapping

This process involves de jure and de facto functions and their current assignment to the different levels of government. The role of private sector and CSOs in the delivery of public sector can also be included in the mapping exercise. Various sources of data can inform the mapping process. These include:

- Legal and administrative framework (sector laws, government notifications, ministerial orders and notifications)
- Knowledge of sector experts
- Field observations and discussions with sectoral field staff, local government representatives and communities
- Feedback from citizens/users of services
- Inventories of assets and documents kept by ministries/local governments
- Budget information
- Staffing lists

The key methodology followed in mapping exercise is the vertical and horizontal unbundling of sector:

- Vertical unbundling involves disaggregating each sector into sub-sectors, clusters of functions and functions
- Horizontal unbundling involves disaggregating each function according to its management functions (i.e. deciding who is responsible for policymaking, strategic planning, M&E, implementation etc.)
An example of the vertical and horizontal unbundling of the education sector is given below:

Vertical unbundling of the education sector would involve disaggregating the sub-sectors such as primary education, secondary education, tertiary education, adult/non-formal education and so on. Next, the services under each of these sub-sectors would be disaggregated. For example, primary education could be unbundled into curriculum design, teacher training, construction and maintenance of school building, development of teaching material, supervision of teaching staff etc. In the next step, each of these services would be disaggregated into the component functions. This is the process of horizontal unbundling. For example, teacher training would involve policymaking, planning, budgeting, regulation, implementation etc.

The expected results of the mapping exercise are:

- Description of pre-decentralisation (current) distribution of functions between levels of government
- Discernment of resources associated with the implementation of the current functions
- Observations and remarks on existing practice

**Functions review**

In the review stage, a proposal for future FA is developed, ideally including (i) resource implications (funds, assets, staffing), (ii) modality of functions (obligatory/discretionary; devolved/delegated), and (iii) capacity development considerations. The proposed FA (new map) developed by the sector ministry is assessed by the coordinating or decision-making body to assure policy coherence across sectors. Stakeholder participation is particularly important at this stage. The proposed distribution of sector functions is reviewed based on consistency with the established policy, inter-sectoral consistency in applying criteria and in formulating functions (size, scope, weight etc.), and assessment of human resource and budgetary implications and how sector ministry and Ministry of Finance plans to deal with them. Finally, the proposed FA is approved by the designated (inter-ministerial) body.
**Effecting the transfer: Agendas for various stakeholders**

While effecting the transfer of functions according to the approved proposal, the relevant ministries have the following agenda at hand:

- To ensure required changes (harmonisation) of the legal framework of the sector (laws, regulations and administrative instruments)
- To decide on guidance to be provided to an SNG for various types of functions, and make this available (e.g., minimum service standards)
- To undertake widespread dissemination and information sharing on new FA
- To put into effect required human resource changes and review/adjust institutional set-up in the sector
- To establish/update fiscal transfer mechanisms with general/special purpose grants
- To adjust revenue assignments as needed
- To adjust planning/budgeting processes
- To transfer assets to SNGs if linked to transferred functions
- To modify (or build up) the needed supervisory system to monitor SNG performance and sanction non-compliance with policies/laws
- To implement capacity development strategies for SNG and national/provincial staff
- To establish and operationalise a system to monitor the effectiveness of the new FA system (if pilots or phasing are used, special approaches/events will be needed to go on to the next steps)

SNGs have the following tasks at their disposal to realise the FA process:

- Adjust their structures, staffing, planning/budgeting processes to accommodate new functions
- Establish/augment asset management system to track new assets
- Facilitate higher level capacity development initiatives, and complement these with SNG-driven capacity development

CSOs/private sector have to do the following to complement the process of transfer of functions:

- Engage as service providers for capacity development initiatives
- Engage as partners in service provision for new SNG functions
- Undertake research that feeds back into public/government forums (on SNG performance, inconsistencies in implementation of decentralisation etc.)

Development partners, meanwhile, can contribute to the following:

- Enhance capacity development and provide additional funding to entrench new functions
- Support learning and dissemination of lessons

**Capacity development required for SNGs**

Capacity development is key to effective reassignment of functions, especially for the SNGs as they will be given a host of new tasks. Capacities can be gained in the process of transferring resources with functions. One key aspect that will require support/training would be accountability relationships, as new hierarchies will be formed for each function that is reassigned. Further, if new technical staff are introduced during the process, technical support will be required.

Some of the key areas where the SNG personnel will require capacity development and/or technical support are indicated ahead:
Observations and challenges

The business process view outlined above is the normative model in the most structured and comprehensive form. However, the process could look very different in reality. Some of the challenges that the FA process can face in a real-world scenario include:

- Decentralisation will tend to happen when the pressure for it builds. It is hard to plan it in a systematic way.
- Technical aspects are often difficult enough, but having constant and clear political support is key (and rarely obtained).
- Whatever the political urgency, the emerging FA methodology can bring in some rationality, transparency and consensus building.
- The methodology can be obstructed by unresolved technical and political (mis)understandings and weak commitment to the decentralisation and local governance policy. The resulting lack of consensus/discord can show up in subsequent steps. In fact, consensus among key actors is more important than a ‘scientific/rational’ best assignment.

Specific pitfalls observed in the real-world scenario include:

- Transferring of functions without resources.
- Transferring of tiny and fragmented functions (activities), or what can be called as the high granularity of ‘functions’.
- Transferring of functions that were never done/funded in the first place or are evidently discretionary functions (not obligatory).
- Promoting general competence (instead of transferred functions) but without finances to make a ‘right of initiative’ meaningful.
- Accounting of staff, assets and funds is centralised and not well-aligned with existing functions:
  - Budgets are based on facilities or encompass entire administrative level.
  - Two or more levels of government are subsumed under one sector budget.
  - Staffing and other resources come under different budgets (routine versus development) and more than one national level institution.
  - Budgets may come from deconcentration channels and from development partners.

Some other challenges and constraints include:

- Obtaining/disentangling data is not easy.
  - Financial transparency by ministries is not always welcome.
  - Ministry are busy with their regular work, and external staff time and skills are not easy to find for this extra financial task.

- Function can fall under the mandate of more than one institution.
- Little use of participatory vehicles (e.g., government commission, discussion forums, regional/local government associations roles; CSOs/university networks).
Involvement of stakeholders is helpful in lending legitimacy and arriving at workable decisions, but stakeholders need to be assisted in taking part. All too often government is unwilling or unable to facilitate this participation.

**Discussion**

Key points from the discussion that followed included:

- The issue of finance is as significant as functions. Linking finance to functions is an issue that could be dealt with systematically.
- The term 'conditional transfers,' which has emerged especially as distinct from block grants/LDFs is a loose word. Rather than providing encouragement to local governments in the form of increased intergovernmental transfers, these could serve as a way of informing the local government that they are expected to spend only the given limited amount.
- The merits of revenue assignment versus block grants is often debated; revenue assignment can mobilise local resources and encourage local scrutiny, but block grants recognise that local revenue potential may be limited.
- While conditional transfers could be criticised, local governments could become extremely inefficient if they are only given block grants without conditions.
- Devolution, one of the modes of transferring functions, is initially costlier than the other two modes – deconcentration and delegation – since devolution entails governance structures. Often, local governments are not given concomitant funds to carry out the devolved functions.
- As far as shared (concurrent) functions are concerned, additional FA or agreements are necessary to ensure efficient implementation; generally the lowest level of the local government that can discharge the function is given the responsibility for the function.

The criteria used for FA can be different principles, such as subsidiarity, efficiency, economies of scale, externalities, capacity, heterogeneity of demand, equity, accountability etc.

**2. Group work**

The objective of group work was to enable participants to come up with their own ideal scenarios of FA. The resource persons and the learning facilitator distributed a detailed guide containing instructions which included:

- The interests and perspectives of various actor groups in FA will differ based on how they perceive the effects of FA regarding their power, access to decision-making and discretion in determining the use of resources.
- There will be groups formed according to three categories of participants: (i) government officials, (ii) representatives from NGOs, research institutes, and capacity development institutions and (iii) elected representatives.
- Main purpose is to reflect on the presented business process view of FA and to discuss how, from the perspective of your group, you can and are willing to be involved in FA.

Each group was also given some guiding questions so as to enable them to engage in detailed and meaningful discussions. These included:

- For the group of government officials: Who should be leading the FA effort? Do you expect meaningful contributions from other stakeholders? If so, what are the most appropriate steps in the process where the involvement of others can contribute to the FA process? Do you think it is the role of the
government to capacitate other stakeholders so that they can contribute more effectively? How do you see the openness of your government in having other stakeholders involved?

- For the group of NGO/think tanks/support agency representatives: Is your institution interested in FA, and can it make a meaningful contribution? Where do you see the comparative advantages of your organisation? At which level/step in the FA process can your organisation contribute most effectively? How do you see the capacity of your organisation for policy analysis and policy advice? What kind of support would you need to engage more effectively? What is the level of autonomy that your organisation has in engaging in the FA processes?

- For the group of elected representatives: What facilitates or impedes the active participation of elected representatives (at various levels: national, provincial/state, local). At which stages of the process do you want to get engaged? What kind of support and capacity development interventions would you need to engage more effectively? Do political party structures provide any assistance or guidance for your participation? What is the role of cross-country learning and exchange (e.g. through regional associations of local governments)?

The learning facilitator captured the main tasks as under:

- What would be a good FA process from your perspective?
- Specifically, how would the actor fit in this process?

Group 1 and 2 consisted of participants from the government, group 3 consisted of participants from NGOs/think tanks and group 4 consisted of elected representatives. The responses of the groups are captured ahead:
**Group 1: Government**

A good FA would be:

- Led by government or government committee under the chief executive with membership from finance, planning and development, local government and relevant departments
- The goals and scope are clearly defined
- Fairly accurate mapping is done by the line department
- All stakeholders including civil society, politicians, think tanks, NGOs, academia, media and development partners are taken on board from the stage of conception of decentralisation

**Group 2: Government**

<table>
<thead>
<tr>
<th>Country</th>
<th>Process of FA</th>
<th>Leading Agency</th>
<th>Capacity Development for Stakeholders</th>
<th>Openness of Government to Stakeholders</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indonesia</td>
<td>Inspired by the reform. After the crisis, people’s power resides more in the Parliament</td>
<td>Ministry of Home Affairs</td>
<td>Civil society, political parties</td>
<td>Open</td>
</tr>
<tr>
<td>Afghanistan</td>
<td>Initiated by the President</td>
<td>Ministry of Finance</td>
<td>Civil society, development partner, government money</td>
<td>Not open</td>
</tr>
<tr>
<td>Bhutan</td>
<td>Initiated by the King in consultation with the public</td>
<td>Central bureaucrat</td>
<td>Government takes the lead</td>
<td>Open</td>
</tr>
<tr>
<td>Mongolia</td>
<td>Initiated by the President, supported by the public and the Parliament</td>
<td>Ministry of Finance</td>
<td>Every organisation gets involved</td>
<td>Open</td>
</tr>
<tr>
<td>Cambodia</td>
<td>Initiated by the ruling political party</td>
<td>NCDD</td>
<td>Development partners, international communities</td>
<td>Open</td>
</tr>
</tbody>
</table>

**Group 3: Think tanks**

- Areas of core strengths: Conceptual clarity, knowledge of rules and regulations, interpreting legal instruments, contextualising FA
- Comparative advantages: Non-biased, non-political, free to talk on issues and any stakeholders, well-connected with stakeholders, resource banks
- Challenges: Dependent on stakeholders (government and development partners) for funds, access to information, political will and support from government, coordination gaps

Think-tanks can prove competent in the five stages of the FA process in ways indicated below:

**FA Methodology**

<table>
<thead>
<tr>
<th>Defining the Goal and Scope of FA</th>
<th>Organisation for FA</th>
<th>Functions Mapping</th>
<th>Functions Review (decisions)</th>
<th>Effecting the Transfer and Monitoring</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conceptual clarity on modalities of decentralisation, defining FA scope, facilitating dialogues between different stakeholders</td>
<td>Technical support to policy coordination bodies</td>
<td>De facto and de jure mapping in consultation with sector experts</td>
<td>Review/ redefine FA map, lobbying/ advocacy</td>
<td>Monitoring of implementation, part of implementation process</td>
</tr>
</tbody>
</table>
Group 4: Elected representatives

- The Ideal FA process would be participatory and should involve policy reform, review of processes, new mapping, review of results
- Support needed: Understanding, knowledge, capacity building, technical knowledge, constitutional guarantee, legal guarantee, block grants/revenue sharing, collection of tax and utilisation of local resources, power to use local resource

3. Political Economy analysis

The resource persons presented the Political Economy (PE) analysis based on the framework presented by Dr. Paul Smoke at the decentralisation conference in Manila, 25-27 August 2015.

Premise for the Political Economy analysis

While FA is largely technical in nature, this technical dimension must be undertaken and supported with a keen eye towards the political dimension of the exercise. FA reforms that take into account the political dimension have a better chance of yielding adequate results.

Desired FA results

What is meant by ‘adequate results’?

- Longer term (downstream) results are those promised by decentralisation in general (improved accountability, better services etc.)
- Immediate results of FA should be the following:
  - Understandable/coherent distribution of functions
  - Assignment that is supported by key stakeholders
  - Assignment that is feasible – can be implemented
  - A distribution that has some stability over time

Overlap between FA/decentralisation goals and interests of actors

Politicians, bureaucrats and elite classes (national and local) generally support reforms when it coincides with their interests (e.g. material benefits, institutional objectives, professional/career motives, political ambitions, etc.). There can be an overlap with FA reform, but this is not assured. PE analysis gains relevance at this juncture as it is focused on the role of various actors and how their interests support or hinder reforms.

How can PE analysis help?

PE analysis clarifies who has been for or against FA and why. It points to alliances and strategies that might be fruitful for the FA process and encourages a “change management” approach in which changes to a system are formally incorporated to reach a desired future stage.

Levels of PE analysis for FA

The PE analysis for FA involves analysis at the following levels and sub-levels:

- Decentralisation context as a whole
  - Which goals are in the public discourse?
  - What political dynamics are afoot; e.g. fear of disintegration leading to hasty decentralisation?
- Institutional landscape of central government:
  - Which actors will be supportive and which will hinder (e.g., are sector ministries concerned that Ministry of Home Affairs is expanding its domain at their expense?)

- Institutional landscape of SNG:
  - Are SNG new and weak, or has SNG not been elected for some time due to "emergencies"?
  - Is there a strong local government association; or is it splintered, politicised, or SNG not elected for some time?

- Local level (politicians, bureaucrats, traditional authorities, citizens, associations, etc.)
  - Is the civil society vibrant?
  - Does the media understand issues and report usefully?
  - Is local elite fairly independent of central elite – or is it captured or co-opted?

**Force-field model of change**

The force-field model of change can bring out key aspects related to the PE of FA. The model involves moving towards a desired state over time taking into account the driving and restraining forces. The journey towards the desired state will be aided by the driving forces and obstructed by the restraining forces. The model helps identify the allies and opponents and their interests, assess the balance of power involved in the proposed change (without a change effort, what will happen to the current situation?), identify the most important players/stakeholders who must be influenced in a change effort and identify how to target each group.

To illustrate an example, the 1998 decentralisation reforms in Indonesia can be subjected to PE analysis using the force-field model thus:

The importance of the driving and restraining forces can be gauged from the fact that it is the balance of the two powers that will decide whether the FA process moves towards or away from the desired state over time. Some of the key relevant questions in this regard are:
What is the nature of the official decentralisation and local governance policy and framework (extent of empowerment)?

What motivates the decentralisation and local governance policy? Does the underlying sentiment seem supportive, antagonistic, cautious, etc.?

Who are the key actors—of various types and at various levels – involved and how?

Are certain actors more powerful than others and what are the consequences?

What is the main agenda of the key actors (consistent or at cross purposes)?

How have development partners been involved and to what effect?

What progress has been made/obstacles encountered in implementation? What factors underlie progress or lack thereof?

What are the realistic prospects for further decentralisation and local governance reform and how might it be pursued?

Of the restraining and driving forces in the Indonesia example, the driving forces, i.e. the pro-decentralisation forces managed to push the process toward the desired state. This is partly because they managed to convince the opposition as well as the larger public that continuing with status quo would lead to disintegration of the country. The driving forces also identified strong actors to push the process forward. For example, President Habibie selected a strong leader Ryas Rasyd as the Minister of Regional Autonomy. The compromise made with the elites in the process was focusing decentralisation on districts and not provinces.

Understanding ‘political will’ and political dynamics

Examining political will is crucial to PE analysis as often ‘political will’ is too broad a category, which makes it seem that the central government/state is monolithic. Also too much emphasis on political will obscures the existence of champions and units where there may be alignment with reform interests.

In addition, for effective PE analysis it is important that the valid concerns of those who resist FA are addressed. This is to ensure that the genuine desire by the opponents to make sure that service failure does not occur, and the disruption that can occur to careers, power, prestige, and formal/informal income streams, are not ignored. In some scenarios, the SNGs themselves might not be interested in moving the FA process forward. For instance, the rich SNGs may not wish to match funds to functions.

Implications for supporting FA processes

Overall, long term engagement may be necessary to understand context, support alliances, and support the non-linear progress. The entire process may involve trial and error, learning as one engages, and flexible programming. Sharing experiences and building national capacity of different actors to play their roles are vital in this regard.

Discussion

Participants raised intriguing queries about PE:

- How can CSOs play a role in FA? CSO can provide assistance such as advice, monitoring, information provision etc.
- How can the PE insights be brought into our realities? The framework outlined in the presentation can be used to figure out the driving forces of FA in each country
- How can FA be done when there are costs that the public would have to bear? FA is not additional, but a part and parcel of decentralisation
- Would too much devolution jeopardise the unity of a nation? It could, if there is a lot of ethnic diversity.
DAY 3
Next Steps
1. The legal construction of Functional Assignment

The sectors and functions for FA can be derived from various legal frameworks of varying strengths that exist in the country:

- **International Conventions & Treaties**
- **Constitution**
- **National laws**
- **Government Regulations**
- **Administrative and Ministerial Orders**

The picture becomes more complex when it is considered that FA can actually be dispersed through several legal instruments of the same weight, as well as through several levels of legal instruments, so that it becomes necessary to read all the legal instruments to get the whole picture, especially when some of them are in conflict.

Also important are the questions which entity decentralises functions (the entire state or the executive side), which entity receives functions (regional/local government executive or legislative body or a combination of these two etc.). These questions have significant implications for clarity in modes of decentralisation, role of central government in supervision/guidance over regional legislatures and accountability mechanisms.

The different legal frameworks present two broad choices for the FA process – either the entire state (consisting of the executive, legislative and judiciary) leverages the constitutional provisions and laws of the country, or the government (i.e. the executive) leverages these instruments along with regulations that cut across the government as well as sector specific regulations applicable to specific ministries.

**Good practices/considerations in legal instruments for transferring of functions**

- Ministries (cabinet) should already be supportive of the content of these legal instruments; the legal instrument alone should not be expected to push through the reform
- Existing legal instrument could be amended; as a way of introducing new functions
- If new instrument is used to introduce functions it should be of same weight as existing instrument to be superseded (*lex posterior derogate lex priori*)
- Legal instruments to effect transfers of functions should be of the same weight across sectors
- The higher the legal instrument the more stability and credibility it will have. The lower the instrument the easier it can be changed as needed; a balance may be needed, suited to national dynamics

Legal instrument for each sector allow for sectoral phasing, easier changes, and consistency with other ‘sectoral’ instruments; omnibus legal instruments are more streamlined and consistent, and easier for the public to apprehend, but are more awkward to change.
2. Follow-up plans

Country platforms presented their follow-up plans in flipcharts:

**Afghanistan**
- Presentation to country platform
- Lobbying FA with identified sectors
- Defining FA based on concept learnt from the workshop

**Bangladesh**
- Presentation of FA to country platform and working group on the Horizontal Learning Programme
- Recommend FA review of local governments to NBDs

**Bhutan**
- Institutional capacity needs to be strengthened
- Coordinate and facilitate among different sectors and agencies
- Initiate a review of the status of implementation of current FA process
- Carry out local government revenue assessment in-line with the FA process

**Cambodia**
- Will push for final decision on transfer of functions (endorsement by NCDD) and effect the implementation of the transfer
- Will push for the highest political decision from the highest level to overcome disagreements between line ministries
- Will look into the selection and harmonisation of legal instruments to support the transfer of functions
- Will develop guideline, manual or MoU for the implementation of transfer of functions

**India**
- Assess the status of FA in India
- Start with looking at status of FA in three states
- Look at one sector – education – in detail in Delhi, Gujarat and Kerala

**Indonesia**
- Lessons learned
  - To sharpen criteria used in FA
- In the future
  - Make an international seminar on autonomy
  - Involve local government associations
  - Work with donors for this

**Mongolia**
- SDC Mongolia will undertake a Governance and Decentralisation programme with the Cabinet Secretariat and Ministry of Finance
- Under this, there will be a plan to develop a National Decentralisation Policy
As part of this measure, a comprehensive functional assignment review will be undertaken. The current plan is to use the Swiss methodology of FA. Following the LOGIN workshop, efforts will be taken to compare the methodology learnt at the workshop with the Swiss one, take the better of the two and apply it to the comprehensive review.

**Myanmar**
- FC should have this training, should understand that they have to be accountable to citizens
- FA mapping and research needed to make policy recommendations
- Provide policy advocacy and research and training assistance as needed

**Pakistan**
- Advocacy and lobbying with main stakeholders for the best FA process
- Formation of inter-provincial e-group for sharing knowledge updates on FA

### 3. Ideas for an e-course on Functional Assignment

The upcoming learning offer, an e-course on FA, was announced in the last session. These were some of the ideas that were given by the participants:

- The e-course should be targeted at government officials, politicians, elected representatives at higher levels, citizens and representatives from different stakeholder groups
- The course should be comprehensive
- The course should focus on doing FA rather than merely learning concepts
- However, too much focus on the doing part can lead to a situation wherein the legal and other complexities are ignored
- The course should aim at enabling policymakers to converse with one another in a common language
- Case studies on Cambodia and Indonesia could be included
- The pre-requisites for registering for the e-course should be clearly listed

</table>
FA is the allocation of governmental roles, functions and tasks between levels of government in accordance with prevailing modes of decentralisation. It is a fundamental building block of multi-level governance, affecting other key features of inter governmental relations. FA gains significance in countries which are shifting from centralised to decentralised governance. In most LOGIN countries FA is an ongoing, though episodic activity and the overall capacity and expertise to undertake this effort is generally low.

The Learning Offer will present an opportunity to members to get an orientation to the concepts, principles, processes and challenges entailed in FA. The orientation and experience sharing workshop will focus on:
- Setting FA against the larger process of decentralisation
- Understanding FA technically
- Processes used to achieve changes in FA
- Frameworks and implementation patterns of FA
- Challenges and open issues

Participants would benefit from presentations and group work but also learn through exercises that draw from their own experiences and contexts.

Targeted Participation: Representatives from the government ministries and departments engaged in FA at the policy and implementation level, decentralisation and local governance training institutions and national level non-governmental/non-state/civil society actors working on strengthening public service delivery.
Questions for Country Group Discussion

1) What follows when you go back to your institution/organization?

2) As a group, what would you do?
